

Concrete & Mortar Colors In Retail Box Packaging

Description:

Integral coloring in small packages are produced from premium mineral oxide colors.

All colors meet ASTM C-979

Colors do not fade in sunlight and can be used inside or out. All colors are available from our standard *boxed concrete & mortar color chart* in consumer boxes for retail. These are popular for dealers retailing roof tile, pavers small precast, Curbing contractors, masonry customers, and general on the job custom color needs.

Uses:

Pre-packaged color blends are convenient because they allow small batches of material made for small portable mixing equipment as needed. Mostly used to mix from bagged products such as concrete, mortars, stucco, grouts and repair products.

A popular alternative for curbing contractors and precast manufacturers because they turn good predictable results from exact premeasured ingredients every time. Always measure color pigments by weight depending on the amount of material to be mixed. Customers can save by purchasing smaller amounts according to their small job needs.

Limitations:

Measuring water, add all other ingredients including pigments by weight. This will result in equal and uniform color every time.

Using the same sources of all ingredients for each batch will always produce consistent results.

The more water used for workability will in turn, lighten colors. Excess water will increase bleeding and produce efflorescence and quality problems.

Mixing:

Use a minimum of 3 Cu/ft. mixing equipment to consolidate all ingredients. Do not add water to the fresh surfaces or re-temper the finish. Most colors should not be added to more than 10% of the total cement used because as pigment reaches their color

saturation point, they will not produce anymore color intensity.

Packaging:

Consumer type boxes and custom packaging are available sizes of : 5lbs; 25lbs boxes and 50lb bags for retail in 16 standard blended iron oxide colors.

Compliance:

All colors meet ASTM- C-979 for Iron oxide pigments.

CONCRETE AND MORTAR COLORS

Color samples shown here are produced with 30 lbs. of Gray Portland Cement, adding the shown amount of color pigment to each sample. Your results may vary based on type of cement used, aggregates and water sources. See directions for use on the back of this chart for consistent results. This chart is for illustration purposes only, always make your own sample first to check your results. Your actual colors may differ from these printed samples.
