

# ColorBlend® Concrete Stain

## Description:

*ColorBlend® Stain* is a water based emulsion of Epoxy-Acrylic polymers and oxide pigments, designed to penetrate new uncoated concrete surfaces or go over clean aged concrete to re-color or complement new colored surfaces by eliminating any color variation from inconsistent finishes and a host of other factors affecting color consistency.

*ColorBlend® Stain* provides a soft sheen finish when dry and is very durable under normal use. This product can also be used on dry wood decks, and many other dry substrates to provide an even colored surface.

Available in eighteen standard colors or in custom colors match for a fee.

## Uses & Limitations:

Use on new colored concrete to correct uneven color surfaces. Use over existing concrete to repair, add or change the color. Product will produce a painted look that is not supposed to replace integral or hardener type colored concrete systems in appearance. This product is intended for its even surface color, enhancing and sealing qualities. It is best to allow fresh concrete to cure for 7 days prior to first coating.

If applied as a cure on new concrete, allow at least 24 hours although penetrating properties will be reduced.

## Application and Surface preparation:

Apply to surfaces at the rate of 200 to 400 Sq./Ft per gallon (depending on profile & absorbency). Do not puddle or dilute the product.

On new freshly poured concrete, apply one coat allowing at least 7 days before applying second coat. On existing concrete, clean all dirt and contaminants and open pores for better adhesion. Apply the first coat to a dry surface and allow stain to penetrate and dry.

A second coat can be applied after the first coat has fully dried.

## Coverage:

Over light textured concrete, the coverage will mostly average 200 to 400 Sq./Ft per gallon. Surface profile and absorbency will determine your true coverage.

Two thin coats are better than one heavy coat.

## Packaging:

Available in 5 gallon pails.

## Compliance:

ASTM 309, ASTM 1315-Type I, class A ASTM 3359 Method A VOC <250 gm./l.
